

Declaration

At Żabka Polska, we recognise the importance of responsible water resource management as a key element of our sustainability strategy. With a full understanding of the global water resource challenges, we express our intention to consider and take actions that can contribute to more efficient water management in our business.

Our priorities include:

1. Management commitment:

Our management is open to supporting initiatives that can contribute to responsible water management. The person responsible for overseeing this process has full authority to allocate the necessary human, financial and technological resources.

2 Adoption of a long-term strategy:

We have developed and implemented a detailed Water Resources Management Plan, which includes specific objectives, timetables for action and mechanisms for monitoring and reporting progress. This plan is regularly reviewed and updated to adapt to changing conditions and challenges.

3 Transparency and disclosure:

We have publicly disclosed our commitment to sustainable water management to highlight our accountability to stakeholders and to enhance our credibility and reputation. We will regularly report both internally and externally on progress towards our goals.

4 Continuous improvement:

We are committed to continually improving our water management practices through regular audits, performance evaluation and innovation. Our goal is to achieve and maintain a positive impact in the management of water resources in our industry.

5 Engaging with stakeholders:

We actively collaborate with local communities, government institutions, NGOs and other stakeholders to jointly manage water resources at the local level.

6. Compliance with international standards:

We have been certified under a recognized international standard for water stewardship (Alliance for Water Stewardship) and comply with all applicable legal and regulatory requirements.

We believe that responsible water stewardship is a fundamental aspect of our business that contributes to the long-term success of our organization and the protection of the environment.

The person responsible for overseeing compliance with the requirements of the objectives set:

Environmental Specialist
